Electric Success for Zero Emissions Commercial Vehicle Manufacturer

During these challenging times of fluctuating fuel prices, low emission zones and environmental concerns, it is refreshing to see a company that is remaining one step ahead in providing a green transport solution for businesses.

Modec, a leading supplier of zero emission vehicles continue their success in supplying a range of electric commercial vehicles to large fleet operators and are heralded as 'the future of urban commercial transport'.

Replacing traditional vans with a fleet of Modec vehicles is good news for businesses large and small as they significantly reduce the overall impact on the environment, and this is being recognised by delivery and transportation fleets worldwide. From their lean manufacturing facility in Coventry, Modec have been producing unique zero emission vehicles that generate little noise, are capable of reaching 50mph and covering more than 100 miles, whilst carrying up to 2 tonnes. The benefits to business are now being realised in organisations such as Tesco's, Marks & Spencers, FedEx, UPS and Speedy Hire.

In December BBC News highlighted the impact that Modec's electric vehicles could have on the environment, when the company appeared in the following news story ['How to turn white van man green'](#).

EFACS E/8

Committed from the outset to building a sound commercial vehicle to revolutionise the automotive industry, the company's success has been supported by EFACS E/8; a fully integrated ERP system from Exel Computer Systems. This flexible, browser based system provides Modec with all the visibility, reports and data required at any time and throughout the entire manufacturing process, whilst ensuring that Modec's operations are as efficient and automated as possible.

EFACS E/8 is a modern, powerful business solution for manufacturing, financial and distribution, built with the latest Internet technology. It has a component structure that enables an economic and precise fit to the most demanding of business requirements. Exel are pleased that Modec continues to move forward in the marketplace, whilst making such a positive environmental impact, and look forward to working with Modec in the future.
